

Addiscombe Road

Croydon, London

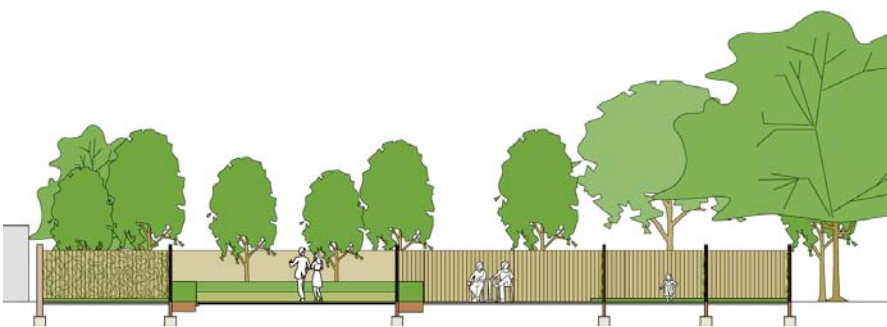

We were appointed by a developer client to provide them with information to submit to the Local Authority to satisfy planning conditions. Information submitted included a general arrangement plan identifying materials and boundaries and a planting plan with schedules. Once the conditions were signed off by the Local Authority we then appointed to produced full planting plans for tender and construction purposes.

The site contains a number of listed building which were being refurbished, converted and extended. The landscape surrounding the buildings needed to accommodate car parking, a bin store, cycle storage, private gardens and shared amenity space.

To the front and rear of the site numerous existing trees occupy land both within and outside of the site boundary. Our proposals ensured most of these were retained with their root protection zones being considered when designing the hard landscape layout.

To the front of the site the tracking requirements of resident and delivery vehicles were carefully considered and incorporated into the paving layout.
