

Clyde Road Seven Sisters, London

We were appointed by our client to provide them with information to enable them to tender the external works on this residential development. This included the production of a general arrangement drawing, planting plan with schedules, detailed section and a full NBS specification.

The development is on the site of former workshops and is accessed by a narrow alley way off Clyde Road. The residential development is entirely surrounded by the boundary fences of the rear gardens of adjacent properties.

The shared space that fronts onto the residential entrances of the development has been designed as a home zone type space. It allows for door step play as well as accommodating occasional delivery and refuse collection vehicles. The paved surface is permeable so as to minimise surface water run off and adopts the principals of Sustainable Urban Drainage Systems (SUDS).

The planting to this space is a mixture of evergreen and deciduous planting and will provide all year round interest. A number of trees have also been specified to provide additional privacy for both residents of this development and the residents of the adjacent existing properties.

The rear gardens have been simply reared with an area of paving adjacent to the house, an area of lawn and some planting.
