

Ravenscourt House

Hammersmith, London

We were appointed by our client to provide landscape related information for a detailed planning application; to satisfy conditions; provide a full tender package of information and to monitor on site works for this student accommodation.

The proposed built form is comprised of three blocks that are orientated approximately north south. The central and east blocks are joined at ground floor level creating the main pedestrian entrance to the development. This arrangement of built form creates three courtyard spaces. The south and west courtyards are located at lower ground floor level whilst the north courtyard is at ground floor.

The three spaces have been designed to be visually pleasing when viewed from above whilst providing the necessary access routes through the scheme. The two lower ground floor courtyards have been designed as spaces for the students to inhabit and relax.

The connecting space between the building entrance and Paddenswick Road has been kept visually free of clutter to enable clear navigation to the main entrance. This space also allows for two disabled parking spaces, cycle storage and access to the plant and bin store rooms. Careful consideration has been given to the paving detail in this area so as to minimise any detrimental effect on the existing tree which is being retained in this location.
