

Ravenscourt House Hammersmith, London

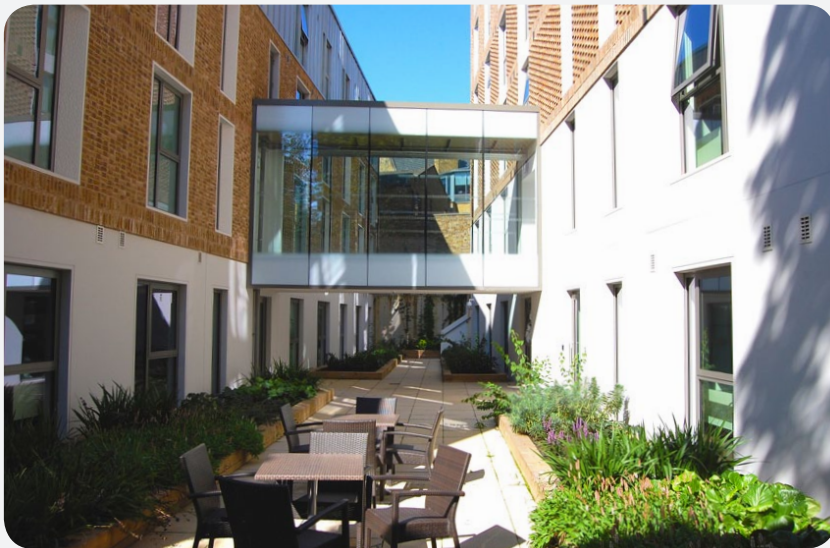

We were appointed by a developer client to provide landscape related information for this student accommodation. Initially we prepared a package of information for a detailed planning submission. We then provided full tender and construction packages of information. Finally, we were tasked to monitor on site works.

The proposed built form is comprised of three blocks that are orientated approximately north south. The central and east blocks are joined at ground floor level creating the main pedestrian entrance to the development. This arrangement of built form creates three courtyard spaces. The south and west courtyards are located at lower ground floor level whilst the north (entrance) courtyard is located at ground floor.

The three spaces have been designed to be visually pleasing when viewed from above whilst providing the necessary circulation routes throughout the scheme. The two lower ground floor courtyards have been designed as spaces for the students to inhabit and relax. The planting to these spaces has been designed so as to be visually pleasing all year round.

The connecting space between the building entrance and Paddenswick Road has been kept visually free of clutter to enable clear navigation to the main entrance. This space also allows for two disabled parking spaces, cycle storage and access to the plant and bin store rooms. The root protection area of the existing tree within this space was also carefully considered to ensure it continues to thrive.
