

KMG Systems Gamlingay, Bedfordshire

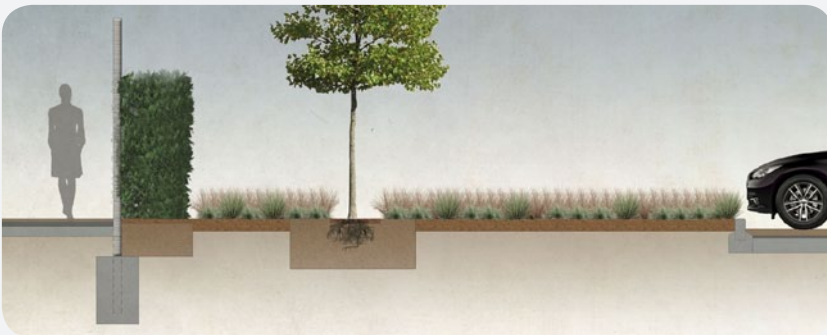

We were appointed by a manufacturer client to develop a landscape design for their proposed fabricating workshop extension. We then prepared a package of landscape architect's information to support a detailed planning submission, full external works tender and construction information.

The proposed landscape extended west and south west of the proposed building extension and consisted of vehicular circulation, loading areas and vehicle parking. The proposals were located on a green field site and were approximately 0.9ha in size. To the west of this field is a newly build residential estate which is located at the urban edge of Gamlingay. To the east of the development site are more manufacturing workshops.

Sustainable Urban Drainage Systems (SUDS) principals were adopted across the majority of the external works areas. All new vehicular running surfaces and the service yard are paved in permeable paving.

Part M compliance and pedestrian safety were both considerations for our landscape architects when designing these external space.

A number of existing trees to the south east boundary of the plot were proposed for retention and were appropriately protected during the construction phase of the project. The proposed planting was carefully selected by our landscape architects and of native provenance. Plant material was selected for their ability to thrive in this exposed environment; provide opportunities for pollinating insects and nesting habitats and food sources for our native birds.
